

Project Title: Designo multi-page website

Project Objective

Your challenge is to build out this multi-page website and get it looking as close to the design as possible.

Customer Requirements

Your users should be able to:

1. View the optimal layout for the site depending on their device's screen size
2. See hover states for all interactive elements throughout the site
3. Receive an error message when the contact form is submitted if:
 - a. The Name, Email Address or Your Message fields are empty should show "Can't be empty"
 - b. The Email Address is not formatted correctly should show "Please use a valid email address"
4. View actual locations on the locations page maps

Deliverables

- Web application source code (GitHub - implement Gitflow with a reasonable number of commits) including a well-written README file
- Use C# and ASP.Net
- Final presentation with a well-deployed site

Evaluation Criteria

- To what degree does the application fulfil the customer's needs and meets the [AmaliTech coding standards](#)?
- How did the candidate utilize git flow processes (feature branches, pull requests)?
- How did the candidate utilize good design patterns, and followed standard code practices (SOC (with no brute force), OOP, SCA etc)?
- How well did the design appeal to the user, colour combination, consistency, and usability?
- How meaningful are the test cases?
- How well did the candidate present his/her results?
